How to add Personal Bookmarks in PowerBI Report

To see personal bookmarks in action, go to any Power BI report that you have view or edit access to. You will notice a new drop-down in the action bar that says “**Bookmarks**”

Once you have modified the report to the view that you like, simply expand the Bookmarks drop-down and select **Add personal bookmark**. By default, the service will suggest a generic name for your bookmark, but you can simply type in your friendly name and select **Save**.
